PROFESSIONAL SUMMARY

Full-stack engineer with 2.6 years of experience building and scaling multi-region web platforms and microservices at Lycadigital India Private Limited. Architected a unified Next.js, React.js, and TypeScript codebase with Redux Toolkit, powering portals across 16 countries and 4 locales per market, and contributed to Node.js, Nest.js, and Express.js microservices handling payments, transactions, and tariff logic. Delivered measurable front-end impact, including approximately 50% reduction in Largest Contentful Paint (LCP) and elimination of Cumulative Layout Shift (CLS) across all 16 markets, through performance optimization, code-splitting, and layout stabilization. Comfortable across the stack, from reusable UI components and headless CMS integrations to REST APIs, PostgreSQL and MongoDB data modeling, and real-time event systems.

EDUCATION

Bachelor of Technology in Electrical Engineering

National Institute of Technology, Kurukshetra
Kurukshetra, Haryana, India

July 2018 - July 2022

CGPA: 7.9/10

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, SQL, Java, Python, C++, HTML5, CSS3

Frontend: Next.js, React.js, Redux Toolkit, Material-UI

Backend: Node.js, Nest.js, Express.js, Socket.IO, REST APIs

Databases and Caching: PostgreSQL, MySQL, MongoDB, Redis, TypeORM

Cloud and DevOps: AWS (EC2, S3, RDS, Secrets Manager, CloudWatch), Docker, Kubernetes, CI/CD Pipelines (Jenkins, GitLab CI)

Tools: Git, GitHub, GitLab, Bitbucket, Jira, Confluence

CS Fundamentals and Core Practices: Data Structures and Algorithms (DSA), System Design, OOP, SOLID Principles, Design Patterns, Authentication and Authorization (JWT, OAuth 2.0, Keycloak, RBAC)

Observability and Developer Tooling: CloudWatch, Grafana, Datadog, GitHub Copilot, Prompt Engineering, AI-Assisted Code Generation and Testing

Concepts: Microservices, Design Patterns, Core Web Vitals, i18n, Feature Flags

WORK EXPERIENCE

Software Engineer, Lycadigital India Private Limited

January 2024 - July 2026

Bengaluru, Karnataka, India

- Architected a unified Next.js, React.js, and TypeScript codebase with Redux Toolkit, powering multi-region portals across 16 countries and 4 locales per market via JSON-based internationalization (i18n).
- Engineered reusable UI components and dynamic product listing and product detail page catalogs for SIM plans and bundles, integrating headless PIM and CMS APIs with Axios interceptors for authentication and error resilience.
- Reduced Largest Contentful Paint (LCP) by approximately 50% and eliminated Cumulative Layout Shift (CLS) through asset optimization, code-splitting, and layout stabilization, improving Core Web Vitals across all 16 markets.
- Enabled zero-downtime, country-specific feature rollouts using CMS-driven feature toggles, eliminating production redeployments.
- Built and maintained four core microservices (Mediation, Profile, Rate, and Common) using Node.js, Nest.js, and Express.js, handling transactions, payments, user lifecycle, and tariff logic.

- Integrated third-party payment and credit APIs, including Plintron (call records) and CRIF (credit scores), with retry, timeout, and audit-log handling for failed transactions.
- Designed an extensible validation rule engine using chain of responsibility, factory, and builder design patterns, enabling new fraud and eligibility rules without modifying core payment logic.
- Built a centralized feature-flag and error-code system controlling country-wise logic, with standardized error messages and multi-language support across services.
- Implemented mobile-number OTP and password login with Redis-backed sessions, and added Socket.IO for real-time payment and profile events.
- Worked across PostgreSQL (transactional and payment data) and MongoDB (audit logs and configs), using TypeORM for entity modeling and tuning indexes and queries to reduce p99 latency.

PROJECTS

Full-Stack E-Commerce Platform

- Engineered a full-stack platform using React.js, Node.js, Express.js, and MongoDB, handling authentication, catalog browsing, cart persistence, and orders.
- Integrated Razorpay API with automated webhook verification for payment confirmation and idempotent order-status updates.
- Implemented stateless authentication using JWT in secure HTTP-only cookies with role-based route middleware.
- Designed a responsive, mobile-first UI with optimized Redux state management to prevent redundant re-renders.
