📄 PROFESSIONAL SUMMARY

Full Stack Software Engineer with 2.6 years of experience designing, developing, and scaling web applications and microservices using **React.js, Next.js, TypeScript, Node.js, Nest.js, and Express.js**. Experienced in building multi-region, multilingual applications deployed across **16 countries**, developing REST APIs and microservices for payments, transactions, user lifecycle, and tariff management. Strong hands-on experience with **PostgreSQL, MongoDB, Redis, AWS, Docker, Kubernetes, CI/CD, authentication, authorization, and system design**. Improved frontend performance by approximately **50% in Largest Contentful Paint (LCP)** and eliminated Cumulative Layout Shift (CLS) across 16 markets through code-splitting, asset optimization, and layout stabilization.

🎓 EDUCATION

National Institute of Technology, Kurukshetra

Bachelor of Technology — Electrical Engineering

CGPA: 7.8956

July 2018 – July 2022

Kurukshetra, Haryana, India

🧠 TECHNICAL SKILLS

Languages: TypeScript, JavaScript, SQL, Java, Python, C++, HTML5, CSS3

Frontend: React.js, Next.js, Redux Toolkit, Material-UI, Responsive Web Design, Core Web Vitals, Internationalization (i18n)

Backend: Node.js, Nest.js, Express.js, REST APIs, Socket.IO, Microservices

Databases & Caching: PostgreSQL, MySQL, MongoDB, Redis, TypeORM, Database Indexing, Query Optimization

Cloud & DevOps: AWS (EC2, S3, RDS, Secrets Manager, CloudWatch), Docker, Kubernetes, Jenkins, GitLab CI/CD

Authentication & Security: JWT, OAuth 2.0, Keycloak, RBAC, Secure HTTP-Only Cookies

Architecture & Practices: System Design, OOP, SOLID, Design Patterns, Data Structures & Algorithms, Feature Flags, i18n

Monitoring & Developer Tools: CloudWatch, Grafana, Datadog, GitHub Copilot, Prompt Engineering, AI-Assisted Development

Version Control & Collaboration: Git, GitHub, GitLab, Bitbucket, Jira, Confluence

📁 WORK EXPERIENCE

Software Engineer

Lycadigital India Private Limited

January 2024 – July 2026

Bengaluru, Karnataka

- Architected and developed a unified **Next.js, React.js, and TypeScript** frontend with **Redux Toolkit**, supporting multi-region portals across **16 countries and 4 locales per market** using JSON-based internationalization.

- Developed reusable React UI components and dynamic product listing/detail pages for **SIM plans and bundles**, integrating headless PIM and CMS APIs through **Axios** with authentication and error-handling interceptors.
- Improved frontend performance by approximately **50% in Largest Contentful Paint (LCP)** and eliminated **Cumulative Layout Shift (CLS)** across 16 markets through asset optimization, code-splitting, lazy loading, and layout stabilization.
- Implemented **CMS-driven feature flags** to enable country-specific functionality and zero-downtime feature rollouts without requiring production redeployments.
- Designed, developed, and maintained **four microservices — Mediation, Profile, Rate, and Common — using Node.js, Nest.js, and Express.js**, supporting transactions, payments, user lifecycle, and tariff management.
- Integrated third-party payment and credit APIs, including **Plintron and CRIF**, implementing retry mechanisms, timeouts, and audit logging for failed transactions.
- Designed an extensible **validation and business-rule engine** using **Chain of Responsibility, Factory, and Builder design patterns**, enabling new fraud and eligibility rules without modifying core payment-processing logic.
- Developed a centralized **feature-flag and error-code framework** for country-specific business logic, standardized error handling, and multilingual error messages across microservices.
- Implemented **OTP and password-based authentication** with Redis-backed sessions and **Socket.IO** for real-time payment and profile events.
- Worked with **PostgreSQL and MongoDB** for transactional data, payment information, audit logs, and configuration data; used **TypeORM** for entity modeling and optimized database indexes and queries to reduce p99 latency.
- Collaborated with cross-functional teams to develop, debug, optimize, review, and maintain production applications and microservices.

PROJECTS

Full-Stack E-Commerce Platform (FarFetch)

React.js | Node.js | Express.js | MongoDB | Redux | JWT

- Developed a full-stack e-commerce platform supporting authentication, catalog browsing, cart persistence, and orders.
- Integrated Razorpay payment processing with webhook verification and idempotent order updates.
- Implemented JWT-based authentication using secure HTTP-only cookies and role-based middleware.
- Built responsive, mobile-first interfaces and optimized Redux state management.
- **Live:** farfetch-eight.vercel.app  | **GitHub:** github.com/manish9427/Farfetech
